Hussnain Ali

AI-First Software Engineer | AI Products, Full-Stack & Backend Systems

Lahore, Pakistan | hussnainilyas2344@gmail.com | +92-3341045764

https://www.linkedin.com/in/hussnain-ali47/

Profile

AI-first software engineer with 4+ years of experience building AI products, full-stack applications, and event-driven systems. Built a financing chatbot from scratch and led its team; created reusable AI workflows for implementation, review, and testing. Hands-on ownership across APIs, delivery, and production monitoring.

Technical Skills

Frontend: React, Next.js, JavaScript, React Native

AI & integrations: LangGraph, LangSmith, LLM integration, AI agent workflows, Model Context Protocol (MCP), GraphQL, REST APIs, automated code review

Backend & data: Python, FastAPI, Flask, PostgreSQL, SQL, Ruby on Rails, Go, Java, ETL pipelines, Apache Spark, Cassandra

Architecture & delivery: Event-driven architecture, microservices, Redis, Docker, caching, batching and retry strategies

Professional Experience

AI-First Software Engineer II | Khoros

Mar 2025 - Oct 2026

- Built reusable AI agent workflows to implement tickets, review PRs, fix issues and test features; embedded codebase context and security, UI and backend quality gates, contributing to a reported 10-20% improvement in delivery throughput.
- Designed an MCP server integrated with the Khoros Community GraphQL API, supporting high-volume queries and mutations with multi-layer caching.
- Built an event-driven automation system using an ETL layer and multiple microservices to ingest and act on community events; adopted by enterprise clients including Microsoft, EA and Quantexa.
- Built a scheduler for recurring custom emails to 100,000+ users, using Redis-cached audience data, batching, exponential retries and fail-safes to control database and server load.
- Removed trillions of Twitter-related Cassandra rows over a two-week rollout using Apache Spark and Datadog monitoring; responded to an overload-related Cassandra outage with no data loss.

Software Engineer (L4) | Vartana

Jun 2024 - Mar 2025

- Built a financing chatbot from scratch and led the team, working with shareholders; the chatbot was later used in financing deals worth millions of dollars.
- Used Python/FastAPI, LangGraph, and LangSmith to connect SMS, website, and email inputs to GraphQL APIs and a Ruby on Rails server.
- Redesigned jurisdiction-handling workflows to meet varying legal and regulatory requirements while improving operational processes.

Software Engineer | Educative

Jun 2023 - Jun 2024

- Built full-stack payments features and received the highest performance-review rating, "Greatly Exceeds."
- Integrated Razorpay and worked with Stripe across payment and subscription workflows, including cancellation and chargeback handling.
- Built the foundation for website discount promotions, handling subscription discounts with recurring and non-recurring behavior.

Junior Software Engineer | Decision Labs

Jun 2022 - May 2023

- Built a MobilityDB-backed system for geo-temporal data with Dockerized databases and APIs; the project secured EUR 60k in funding.
- Developed a React interface that visualized geo-temporal data as animated vehicle movements.

Education & Recognition

B.Sc. Computer Engineering, UET Lahore | Sep 2019 - May 2023 | GPA: 3.74

Winner, UET-ACM Coding Competition (2022) | Frontend Development with React, Coursera (2022)
